

Realtor AIOS

Partnership Proposal

An AI Operating System for realtors — installed personally, one module at a time, so a non-technical agent actually uses it instead of abandoning it.

What it is	9 connected modules + one dashboard, running in Claude Code on the realtor's own computer
Who it's for	Individual realtors and small teams — zero technical skill required
This document	A partnership structure for referring Realtor AIOS into your network

What a realtor you refer actually gets

This isn't a self-serve download. Every client gets a hands-on install, personally, because a non-technical realtor who's handed a folder and a PDF guide will quit by module two. That's the commitment behind this partnership — and why referring into it doesn't put your relationship at risk.

DAY 1 · UP TO 3 HOURS · ZOOM OR IN PERSON

The full install session

I sit down with them — not a call to schedule a call, the actual install. Within this session: 1–2 hours fully understanding their business (their market, their niche, how they actually work) and capturing their writing voice, so day one already sounds like them, not generic AI. The remaining time gets the foundation installed and their first real output queued before I leave.

DAYS 1–30 · ONE MODULE A WEEK · 15-MIN WEEKLY CHECK-IN

The 30-day rollout

Nine modules on day one would overwhelm anyone. Instead, one new module installs each week, paired with a 15-minute check-in to confirm what's working, answer questions, and green-light the next one. By day 30 they have the full system running — at a pace they actually absorbed.

ONGOING

What's running by the end

A realtor with all nine modules installed, their own voice captured, a month of content and lead-response habits already in motion, and a standing weekly touchpoint to keep it tuned.

THE DASHBOARD

One front door for all nine modules

Every module is reachable from a single dashboard — no command-hunting. Organized around how a realtor's week actually runs:

Admin	Listing Prep, Transaction Coordinator — walk into appointments ready, nothing slips between offer and close
Marketing	Marketing Engine — a week of on-brand content, researched and drafted in their voice
Clients & Leads	Client Profiles, Lead Engine, Monday Skill, Market Research — every inquiry caught, every client matched to real listings at real market value
Access anywhere	Claude Code runs on the desktop and reaches the same workspace from web and mobile — not chained to one computer

What it costs, what you earn

\$2,500 STANDARD PACKAGE Full install, all 9 modules, 30-day rollout, one-time.	\$500 FOUNDING-PARTNER RATE Your first 3 referred clients only — makes it an easy yes.	30% REFERRAL COMMISSION Paid to you on every client you refer who signs on.
---	--	--

■ **Placeholder — needs your input.** Your notes included "[80 50, 30%]" alongside this pricing, and I could not tell whether that meant a tiered discount schedule, a cost/margin breakdown, or something else. I did not guess at numbers for a document going to a real partner — replace this box once you tell me what it should say.

How the partnership works

- You introduce Realtor AIOS to realtors in your network — a warm introduction is all that's needed.
- Every client you refer gets the identical white-glove onboarding described above — your name stays attached to a good experience, not a self-serve link.
- Your first 3 referred clients are onboarded at the \$500 founding-partner rate — an easy first yes for people you vouch for.
- You earn 30% commission on each successful referral, paid after the client's onboarding is complete.
- No exclusivity required, no cap on referrals — this scales with your network, not against it.

Why this, why now

This isn't a pitch deck — it's a working product. Nine modules are built and tested end to end: a client conversation becomes a structured profile and a drafted follow-up email; an MLS export or a plain-language search becomes a shortlist matched against real market comps; a week of content gets researched and written in the realtor's own voice. The dashboard that ties it together is built. What's being proposed is distribution, not a bet on whether the product will exist.

Next step

If this structure works for you, reply and we'll set the first referral in motion — I'll run their full install session personally, same as every client after.
